### DECLARATION

We hereby declare that the work being presented in this project report, for the partial fulfilment of requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering at Madhav Institute of Technology & Science, Gwalior is an authenticated and original record of my work under the mentorship of **Mr. Mir Shahnawaz Ahmad, Assistant Professor**, Computer Science and Engineering.

We declare that we have not submitted the matter embodied in this report for the award of any degree or diploma anywhere else.

## MADHAV INSTITUTE OF TECHNOLOGY & SCIENCE, GWALIOR

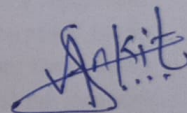

(A Govt. Aided UGC Autonomous & NAAC Accredited Institute Affiliated to RGPV, Bhopal)

### ACKNOWLEDGEMENT

The full semester project has proved to be pivotal to my career. I am thankful to my institute, **Madhav Institute of Technology and Science**, for allowing me to continue my disciplinary project as a curriculum requirement, under the provisions of the Flexible Curriculum Scheme (based on the AICTE Model Curriculum 2018), approved by the Academic Council of the institute. I extend my gratitude to the Director of the institute, **Dr. R. K. Pandit** and Dean Academics, **Dr. Manjaree Pandit** for this.

I would sincerely like to thank my department, **Department of Computer Science and Engineering**, for allowing me to explore this project. I humbly thank **Dr. Manish Dixit**, Professor and Head, Department of Computer Science and Engineering, for his continued support during the course of this engagement, which eased the process and formalities involved.

I am sincerely thankful to my faculty mentors. I am grateful to the guidance of **Mr. Mir Shahnawaz Ahmad**, **Assistant Professor**, Computer Science and Engineering for their continued support and guidance throughout the project. I am also very thankful to the faculty and staff of the department.

## Abstract

When opening a new restaurant, geographical placement is of prime importance in determining whether it will thrive. Although some methods have been developed to assess the attractiveness of candidate locations for a restaurant, the accuracy is limited as they mainly rely on traditional data sources, such as demographic studies or consumer surveys. In this project, we particularly take advantage of pre-existing restaurants to construct predictive features for assessing the attractiveness of candidate locations to expand a restaurant. Specifically, we investigate market competitiveness, and geographic characteristics of a location under consideration for a prospective restaurant. We devise the three sets of features and incorporate them into a classification model to predict the optimality of opening a restaurant at a candidate's desired location. Moreover, our experimental results suggest that market attractiveness and market competitiveness features are more predictive than geographic features. We are going to use Foursquare API for getting the information about pre-existing restaurants in that area.

**Keywords:** Geographical, Classification Model, Demographic, Market Competitiveness, Foursquare API

## सार:

एक नया रेस्तरां खोलते समय, भौगोलिक स्थिति यह निर्धारित करने में प्रमुख महत्व रखती है कि क्या यह पनपेगा। हालांकि रेस्तरां के लिए उम्मीदवार धानों के आकर्षण का आकलन करने के लिए कुछ तरीके लवकलसत लकए गए हैं, सटीकता सीलमत है क्योंकि वे मुख्य रूप से जनसांख्यिकीय अध्ययन या उपभोक्ता सर्वेक्षण जैसे पारंपरिक डेटा स्रोतों पर भरोसा करते हैं। इस परियोजना में, हम लवशेर् रूप से पूवा-मौजूदा रेस्तरां का लाभ उठाते हैं तालक एक रेस्तरां का लवस्तार करने के लिए उम्मीदवार धानों के आकर्षण का आकलन करने के लिए भलवष्य कहनेवाला सुलवर्ाओं का लनमाण लकया जा सके। लवशेर् रूप से, हम एक सांभालवत रेस्तरां के लिए लवचारार्न धान की बाजार प्रलतस्प और भौगोलिक लवशेर्ताओं की जांच करते हैं। हम सुलवर्ाओं के तीन सेट तैयार करते हैं और एक उम्मीदवार के वालछत धान पर एक रेस्तरां खोलने की इष्टतमता की भलवष्यवाणी करने के लिए उन्हें एक वगीकरण मॉडल में शालमल करते हैं। इसके अलावा, हमारे प्रयोगात्मक पररणाम बताते हैं कि भौगोलिक लवशेर्ताओं की तुलना में बाजार आकर्ाण और बाजार प्रलतस्पर्त्मक लवशेर्ताएं अलर्क अनुमालनत हैं।

## INTRODUCTION

### Overview

The project aims to develop a Website in operating systems. Custom Website draws its inspiration from shop management like Amazon, Flipkart, Myntra, and many more. It has been designed to provide a user-friendly interface for carrying out a variety of tasks by employing certain well-defined commands.

This website is on Ecommerce, also known as electronic commerce or internet commerce , refers to the buying and selling of goods or services using the internet , and transfer of money and data to execute these transaction. Ecommerce is often used to refer to the sale of physical products online.

## Required Tools Descriptions

- 1) **HTML** – HTML is the combination of hypertext and markup language. Hypertext defines the link between the web pages. A markup language is used to define the text document within tags which define the structure of web pages. This language is used to annotate (make notes for the computer) text so that the machine can understand it and manipulate text accordingly. Most markup languages (e.g. HTML) are human-readable. The language uses tags to define what manipulation has to be done on the text.
- 2) **CSS** - Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a markup language such as HTML. CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript. CSS is designed to enable the separation of presentation and content, including layout, colours, and fonts.
- 3) **VS Code** - Visual Studio Code is a code editor in layman's terms. Visual Studio Code is "a free-editor that helps the programmer write code, helps in debugging and corrects the code using the Intelli-sense method". In normal terms, it facilitates users to write the code in an easy manner.

## SDLC Phases

### 1. Requirement gathering and analysis

This Software aims at developing a Ecommerce website for operating systems. The main purpose of the software is to perform the tasks of the user at certain commands, provided in either of the way. It will ease most of the work of the user as a complete task can be done on a single command. Custom website draws its inspiration from Online Market like Amazon, Flipkart, Shopsee, Mintra and many more .

These is the tools required for creating the Custom Website

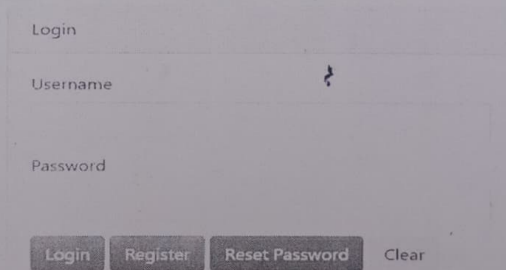

- ☐ Visual Studio Code
- ☐ HTML
- ☐ CSS
- ☐ XAMPP Control Panel
- ☐ Apache Server
- ☐ MySQL Server

## Design

**Login Page Design-** This login page will make sure no person can access the pages without the authentication and the password will be encrypted for the user privacy.

Login in will show a small message about who logged in to the website with the admin name  
The name will disappear when the user will reload the page for a user friendly experience.

The image shows a login form with a light gray background. At the top, the word "Login" is displayed. Below it, there are two input fields: "Username" and "Password". The "Username" field has a small cursor icon. Below the input fields, there are four buttons: "Login", "Register", "Reset Password", and "Clear". The buttons are arranged horizontally and have a dark gray background with white text.

## Software development model

My project is based on Waterfall Model-

Waterfall Model:

Waterfall model is the very first model that is used in SDLC. It is also known as the linear sequential model.

In this model, the outcome of one phase is the input for the next phase.

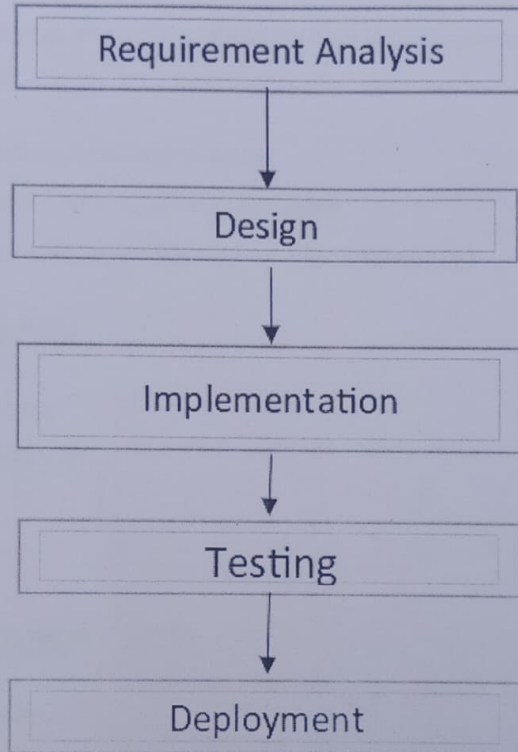

Development of the next phase starts only when the previous phase is complete.

- First, Requirement gathering and analysis is done. Once the requirement is freeze then only the System Design can start. Herein, the SRS document created is the output for the Requirement phase and it acts as an input for the System Design.
- In System Design Software architecture and Design, documents which act as an input for the next phase are created i.e. Implementation and coding.
- In the Implementation phase, coding is done and the software developed is the input for the next phase i.e. testing.
- In the testing phase, the developed code is tested thoroughly to detect the defects in the software. Defects are logged into the defect

tracking tool and are retested once fixed. Bug logging, Retest, Regression testing goes on until the time the software is in go-live state.

In the Deployment phase, the developed code is moved into production after the sign off is given by the customer.

# Project Requirement

The system requirement to build a Custom Website are given below:

## Window-Based Requirements

Computers running Microsoft windows must meet the following minimum Hardware and Software requirement.

- Microsoft Windows 7/8/10(32 or 64 bit)
- 3 GB RAM minimum,8 GB RAM recommended
- 4 GB Recommended (500 MB for IDE + 1.5 for Android SDK)

## Software Requirement

- Visual Studio Code
- Xampp Control panel
- HTML
- CSS

## Hardware Requirement

- Laptop/Computer
- USB Cables
- Mobile Devices

## Conclusion

Through this eCommerce website buyers can shop for goods and the shop offer products and services for the customers.
