JULY-DEC 2021

MADHAV INSTITUTE OF TECHNOLOGY & SCIENCE, GWALIOR

(A Govt. Aided UGC Autonomous & NAAC Accredited Institute Affiliated to RGPV, Bhopal)

CERTIFICATE

This is certified that **Aditya Soni** (0901CD211006) has submitted the project report titled **Library Management System** under the mentorship of **Mahesh Parmar**, in partial fulfilment of the requirement for the award of degree of Bachelor of Technology in Computer Science and Engineering from Madhav Institute of Technology and Science, Gwalior.

DECLARATION

I hereby declare that the work being presented in this project report, for the partial fulfilment of requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering at Madhav Institute of Technology & Science, Gwalior is an authenticated and original record of my work under the mentorship of **Mahesh Parmar, Assistant Professor**, Department of Computer Science and Engineering.

I declare that I have not submitted the matter embodied in this report for the award of any degree or diploma anywhere else.

(A Govt. Aided UGC Autonomous & NAAC Accredited Institute Affiliated to RGPV, Bhopal)

ACKNOWLEDGEMENT

The full semester project has proved to be pivotal to my career. I am thankful to my institute, **Madhav Institute of Technology and Science** to allow me to continue my disciplinary/interdisciplinary project as a curriculum requirement, under the provisions of the Flexible Curriculum Scheme (based on the AICTE Model Curriculum 2018), approved by the Academic Council of the institute. I extend my gratitude to the Director of the institute, **Dr. R.K. Pandit** and Dean Academics, **Dr. Manjaree Pandit** for this.

I would sincerely like to thank my department, **Department of Computer Science and Engineering, for allowing** me to explore this project. I humbly thank **Dr. Manish Dixit**, Professor and Head, Department of Computer Science and Engineering, for his continued support during the course of this engagement, which eased the process and formalities involved.

I am sincerely thankful to my faculty mentors. I am grateful to the guidance of **Prof. Mahesh Parmar**, Assistant Professor, Department of Computer Science and Engineering, for his continued support and guidance throughout the project. I am also very thankful to the faculty and staff of the department.

ABSTRACT

The Library Management System is an application for assisting a librarian in managing a book library in a university. The system would provide basic set of features to add/update student details , add/update book details, and manage log in specifications for the system.

Library Management System is a type of Management Information System, its development include the establishment and maintenance of back-end database and front-end application development aspects. For the former require the establishment of data consistency and integrity of the strong data security and good libraries. As for the latter requires the application fully functional, easy to use and so on.

ABBREVIATION

- **OOPs -> Object Oriented Programming**
- **QUE -> QUESTIONS**
- **And different variables**

Chapter 1: INTRODUCTION

1.1 What is OOPs:

- **Object-oriented programming (OOPs)** is a programming paradigm based on the concept of "objects", which can contain data and code. The data is in the form of fields (aka attributes or properties), and the code is in the form of procedures (aka methods).
- **OOPs** concentrates on the objects that programmers desire to manipulate rather than the logic necessary to do so. Large, sophisticated, and actively updated or maintained programmes are a good fit for this method of development. This encompasses mobile applications as well as design and production software. OOPs, for instance, can be applied to management information system softwares.

1.2 PROCEDURE :

- Create objects of the class student_reg.
- Store static data of students for login purpose.
- Create variable array of data type struct library.
- Call function libtest(). The function libtest contains the static data for all the books available in the library.
- Initialize and declare all the variables required for the functioning of the program.
- Now create an array of objects of class student_reg for storing the details of newly registered candidates.
- Now we'll call the function digilib. digilib() stores the welcoming pattern of digital library.
- Now the function 'options' is called. Here we'll pass all the necessary arguments required for the working of this function.
 - This function is used to provide user the following functions :
 - Register a new student.
 - Login.
 - Exit.
 - If user chooses the option 'a', the further process takes place-
 - The program takes the input of user's name and id.
 - If user chooses the option 'b',
 - The user is required to provide the login id.
 - If user chooses the option 'c',
 - The program comes to an end.
- In case if the user chooses the option 'a' or 'b', after providing the necessary details, the user is redirected to the page containing the following operations:
 - View Book List.
 - Issue Book.
 - Return Book.
 - Back.
 - If user chooses the operation (i),
 - The user is shown the list of all the available books in the library.

- If user chooses the operation (ii),
 - The user will be shown the book list and then the user is required to enter the serial number of the book which the user wants to issue.
 - In case, if a user doesn't enter serial number from the book list displayed above, the message-

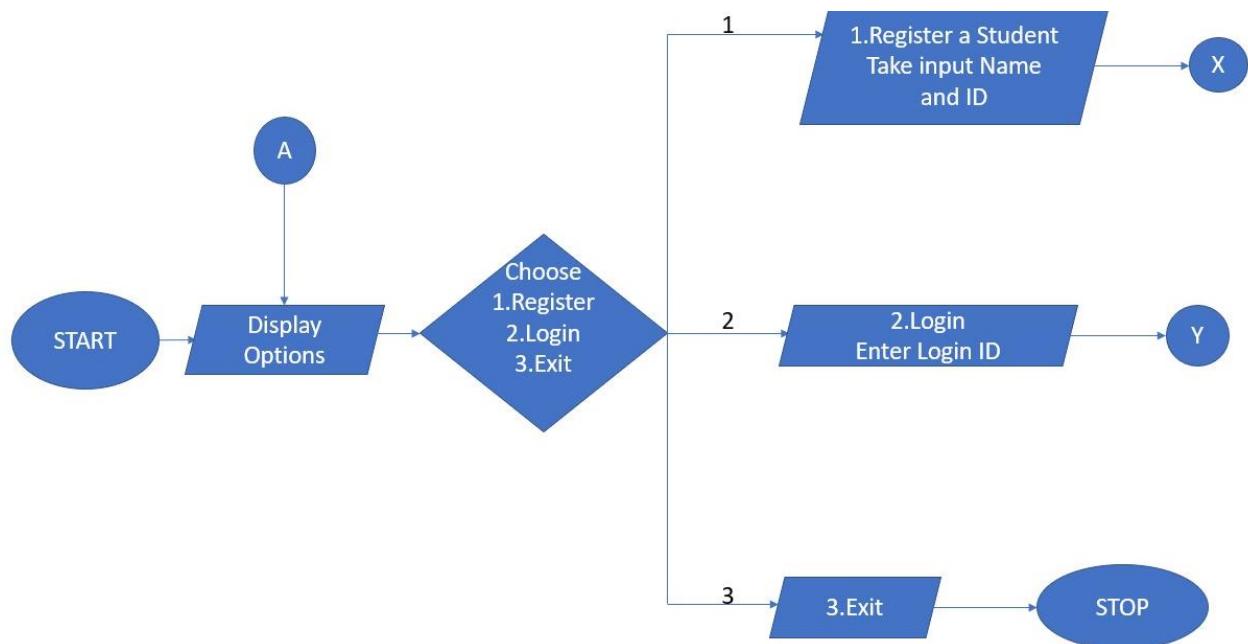

"No Such Book Found" will be displayed.
 - If the selected book is already issued, the message-

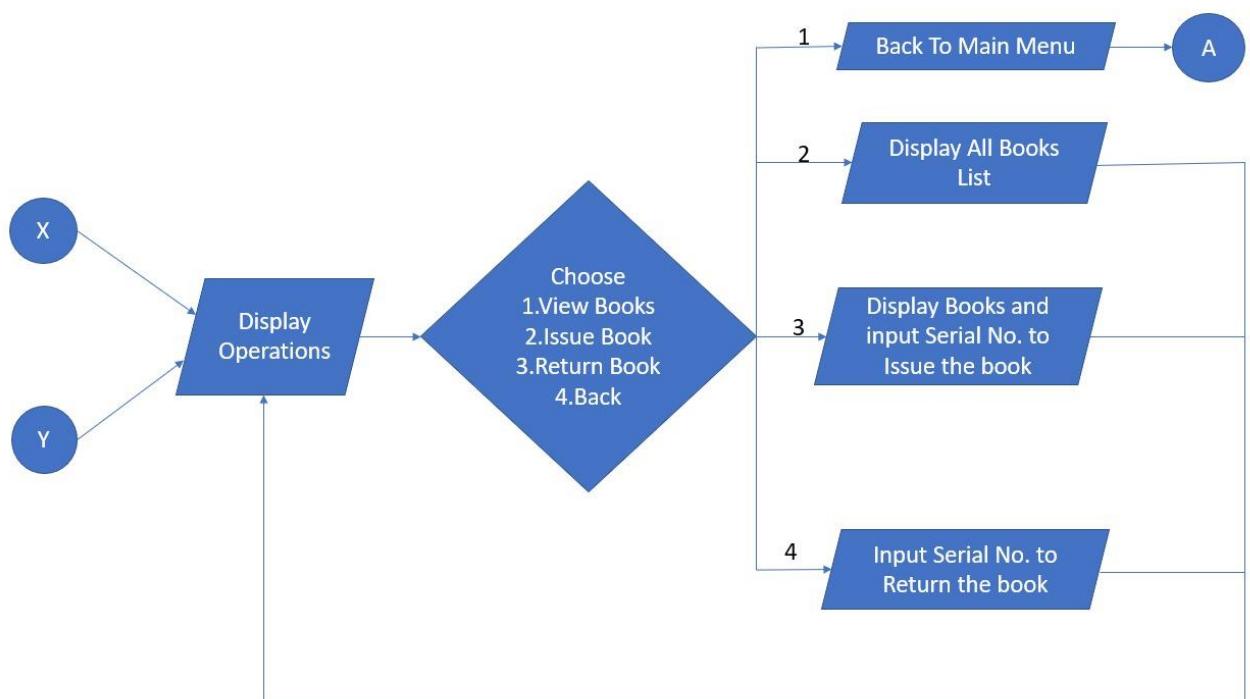

"This book has already been issued" will be displayed.
 - In all other cases, the book will be successfully issued.

- If user chooses the operation (iii),
 - If no book has been issued, the user will be shown the message -
 - "No books have been issued yet."
 - Else,
 - The user will be required to enter the serial number of the book which the user wants to return.
 - In case, if a user doesn't enter the correct serial number, the message-
 - "No Such Book in the Records" will be displayed.
 - If the selected book is not issued, the message-
 - "This book has not been issued yet" will be displayed.
 - In all other cases, the book will be successfully returned.

- If user chooses the operation (iv),
 - The user will be redirected to the main page.

Chapter 2: FLOW CHART

Chapter 3: CLASS DIAGRAM

student_reg

- student name
- student id

CONCLUSION

The project LIBRARY MANAGEMENT SYSTEM is for computerizing the working in a library. The software takes care of all the requirements of an a library and is capable to provide easy and effective storage of information related to books & users.
